

MASTERGRAIN™

REDEFINE YOUR DOOR

CREATE A FIRST IMPRESSION THAT'S BUILT TO LAST

Redefine Your Door

In 2008 Weber Manufacturing Technologies Inc., a Midland, Ontario, Canada-based tooling company, set out to leverage their proprietary Nickel Vapor Deposition (NVD) technology to completely revolutionize how fiberglass entry doors are made. NVD technology provides a unique way to capture fine, surface grain details, found on wood, leather and other materials.

NVD technology works by taking a silicone cast of the actual material and then creating highly specialized nickel tools, which are used to transfer the grain. With NVD, Weber created a complete offering of fiberglass door designs and fiberglass clad components. The offering was branded MASTERGRAIN™ and the company began selling doors across North America. There are other technologies which can replicate woodgrain for fiberglass door production, but none can deliver the intricate and beautiful detail that a MASTERGRAIN door is able to produce at a microscopic level using NVD technology. Today, in addition to MASTERGRAIN doors, Weber uses NVD technology to create tooling and finished products for some of the world's most luxurious automotive, aerospace and building products brands.

BUILT BETTER BECAUSE BEAUTY IS ONLY SKIN DEEP

Contemporary Cherry Engraved | C125 | Arabica

Craftsman Fir | F304 | Kenzie

MASTERGRAIN™ products can replicate, with fine detail, woodgrain and texture right down to the knots and swirls that give a wood door its unique character and charm. Components come together seamlessly to create luxurious, durable, high-quality doors that distinguish a home's exterior from a distance and completely adorn its interior. Going beyond its striking appearance, you will find a MASTERGRAIN door has robust build quality that delivers energy and performance criteria that is best-in-class in the door industry.

The difference is found in the design and engineering, in the quality of the materials used and finally in the state-of-the-art manufacturing process. MASTERGRAIN is the only door brand in the industry to offer fiberglass cladded components to improve both appearance and performance. Door skins are made thicker than industry standard to provide more strength to better resist dents, dings and scratches. In addition, composite materials are used for many of the door slab and frame components to eliminate twisting, warping, mold and rot.

The high-density polyurethane foam core provides best-in-class insulation and is chlorofluorocarbons (CFC) free. There is more to a MASTERGRAIN door than meets the eye, although what meets the eye is extremely beautiful. Explore this brochure to find out which MASTERGRAIN door is right for you.

A TRUE ENTRY DOOR SOLUTION

What sets MASTERGRAIN™ apart? It's the commitment to quality and investment in world-class manufacturing technologies. Every MASTERGRAIN door is built with fiberglass cladded components in order to deliver a finish that is seamless, strong, and, perhaps best of all, completely stainable. The result is a versatile door that flawlessly replicates the look, texture and aesthetic of real wood.

1. Door Skins
Nickel Vapor Deposition (NVD) technology, a process exclusive to MASTERGRAIN, is used to mold the world's strongest fiberglass door skins of various thicknesses and finishes.

2. Polyurethane Foam Core
High-density, CFC-free polyurethane foam is injected into the slab core to offer superior insulation, energy efficiency, sound-dampening and resistance to dents.

3. Engineered Wood with Hardwood Maple Cap
Stiles are made from premium materials so they are exceptionally strong, stable and straight. They are also built wider than industry standard with uniform lock and hinge sides to accommodate almost any hardware and improve door performance over time.

4. Composite Rails
Rot-resistant composite (plastic film and wood fibers) are used for both the top and bottom rails. This material is resilient and more stable than wood or other materials.

5. Composite Reinforced Mull Post
Composite core components with aluminum reinforcement offers increased security, strength and fire ratings. Plus, fiberglass cladding adds complete design versatility.

6. Anodized Satin Nickel and Black Sills
Designed specifically to provide a tight seal, aluminum sills protect against moisture, air and debris infiltration into the home while offering the ability to complement any entry door system and configuration.

7. Molded Fiberglass Door Lite Frame
A patented clip assembly system is employed to eliminate the need for unsightly screws and plugs. It creates a unique look that is completely seamless.

8. Simulated Divided Lites (SDLs)
Made with molded fiberglass to provide countless customization options, SDLs can be used in any design configuration as well as stained to match door panels and other components.

9. Sidelite Composite Glass Stop
Matching composite glass stops, made with or without woodgrain, are installed on the inside of the door lite frame to hold glass securely in place, deliver improved performance and durability and make removal/replacement easier.

10. Composite Jamb with Woodgrain Fiberglass Cladding
All jambs are made using composite material. Woodgrain fiberglass cladded jambs are offered to attain a completely seamless look as they can be stained.

11. Brickmold with Woodgrain Fiberglass Cladding
Available in a variety of sizes and finishes, this fiberglass-clad brickmold is used as an aesthetic casing. It will not rot, split or warp and is completely stainable for a beautiful and seamless aesthetic.

IT'S WHAT'S INSIDE THAT COUNTS

Every MASTERGRAIN™ door is engineered and built in North America by skilled technicians to ensure the highest quality. Unlike other doors, the manufacturing processes and technologies which MASTERGRAIN employs, eliminate the need to compromise between strength and lasting beauty.

- Does NOT warp, rot or crack like wood doors and requires less maintenance
- Does NOT rust or dent like steel doors
- Excellent grain and stain matching across fiberglass components
- Engineered for the extreme hot and cold temperatures of North America

STRENGTH

A pair of robust 4-1/8" stiles run down each side of the door slab. The stiles are made of 3-7/16" engineered wood and a 5/8" hardwood cap.

HIGH DEFINITION

To produce the most realistic woodgrain fiberglass doors, it starts with a high-quality real-wood door. Using our exclusive NVD technology we replicate the organic grain from the door onto a nickel tool. The tool is used to press a fiberglass skin with a minimum thickness of 0.09". To accommodate metal inlays and routed designs we press a 0.175" thick skin.

PERFORMANCE

All of our doors are insulated with high density, CFC free, polyurethane foam. Our formula improves energy efficiency and sound abatement.

CONSTRUCTION

Doors are constructed using rot resistant composite top and bottom rails.

IMPACT TESTED PRODUCTS ARE FOUND UNDER THE FOLLOWING APPROVAL NUMBERS

Non-Impact	Impact	HVHZ

*Tested with opaque 3'-6" x 8' outswing.

* MASTERGRAIN doors are NAFS Certified.

MOLDED FIBERGLASS DOOR LITE FRAMES & SIMULATED DIVIDED LITES (SDLs)

MASTERGRAIN™ molds their own patented woodgrain and smooth fiberglass door lite frames that use a clip assembly system that eliminates the need for unsightly screws and plugs to deliver a unique uninterrupted look. MASTERGRAIN also offers molded fiberglass simulated divided lites (SDLs).

- Fiberglass frames are more rigid than plastic frames.
- No welded corners ensures a tight weather seal to the door and minimizes distortion.
- Plugless frame system eliminates all unsightly screw holes and plugs for a clean aesthetic.
- Traditional plugged door lite system uses screws and plugs to deliver certified performance for impact, air, water and cycle testing.
- Molded fiberglass SDL bars provide an energy-efficient way to create a number of design configurations for a completely custom look.
- Door lite frames and SDLs can be stained to match door panels and all other MASTERGRAIN door components for a seamless beautiful aesthetic.

SDLs come pre-taped and notched to create a beautiful lap-joint
